

## SYSTEM AND METHOD FOR COMPARING OBJECTS

### ABSTRACT

A method for comparing objects includes selecting a first object and a second object, each object associated with an instance of at least one primary parameter and an instance of at least one secondary parameter, each secondary parameter associated  
5 with one of the primary parameters. At least a portion of the first object and at least a portion of the second object are compared to identify one or more differences between the selected objects. At least a portion of the differences are identified as ignorable based, at least in part, on the one or more primary parameters.
